

No Problem IT

Safe. Secure. Sorted.

Safe and secure remote working?

We can help!

**Get Full Device Management @
just £62.50 ex VAT for 5 users!**

(normally worth £549.50)

Remote working is here to stay.

The biggest challenge? Keeping company data safe when teams are working remotely using their own laptops/devices. This is where No Problem IT can help.

We are offering a complete [Home Working Package](#) which includes:

- Remote Monitoring software: free installation per PC
- Crypto viruses protection: creating an admin account per device
- Free hard drive encryption (Windows 10 Pro required)
- Bitdefender Antivirus: installation of 1 month free trial
- **Added Bonus** – Free consultation: reviewing your current Data Management and Security setup, and Hardware & Software audit. Plus, recommendations based on your budget and requirements.

Our [Home Working Package](#) is 100% cloud based, making it quick, *scalable*, and affordable - all your team need is a secure Wi-Fi connection to access applications.

Take advantage of our [Home Working package](#) offer and Let NPIT future proof your IT.

We will ensure your systems are updated, flexible and secure as your business moves forward.

* T&C's apply, E&EO. Cost of software not included. All users must have Win 10 pro. Minimum 5 users per business. Ongoing warranty management for all hardware sourced by No Problem IT.

Bundle Offer – Breakdown

RMM – Remote monitoring and management

Remote monitoring and management, also known as network management or remote monitoring software, is a type of software designed to help managed IT service providers (MSPs) remotely and proactively monitor client endpoints, networks, and computers and fulfil monthly patching (updates, fixes and improvements).

With the simple use of a Naverisk Agent and Splashtop Streamer, NPIT can start monitoring your company devices within minutes and keep an eye on every machine on the network from remote location. This allows us to resolve any issues that arise quickly and efficiently.

Admin account per device for protection from crypto viruses

Limited administrator accounts are created specifically for administrative tasks, including installing and updating applications and other software. Using this system will prevent or limit most malware infections, both on PCs and Macs.

Free hard drive encryption (Windows 10 Pro required)

Encryption helps protect you and your customers from data theft or accidental loss, by rendering data stored on hard drives unreadable when an unauthorized user tries to gain access. Hard drive encryption software therefore makes it very difficult for data to be accessed or stolen by hackers.

Installation of a free trial of Bitdefender Antivirus for 1 month

Bitdefender is one of the top-rated antivirus software of 2021. Bitdefender can defend your PC against a wide variety of cyber threats. These include various types of malware such as viruses, spyware, adware, and ransomware.

Consultation Areas

- Data**
 - How data is managed, stored and secured when employees work remotely.
 - Microsoft 365, Intune and Azure benefits.
- Security**
 - Data Security & Compliance.
