

CYBER ESSENTIALS CERTIFICATION

Reap the benefits of a Cyber Essentials Certification.

Cyber threats are on the rise as fraudsters use ever more sophisticated techniques to access or encrypt business critical data.

Getting your Cyber Essentials accreditation will help guard your organisation against the most common cyber threats and demonstrate your commitment to cyber security.

Key Cyber Essentials Fundamentals

Cyber Essentials is a simple but effective, Government backed scheme that will help you to protect your organisation, whatever its size, against a whole range of the most common cyber-attacks.

The certification lays out a set of policies that ensure that you are both currently compliant, while ensuring you practice good cybersecurity procedures now and for the future.

No Problem IT will manage the Cyber Essentials certification for you and ensure that you are compliant in all areas before submitting it and obtaining your certificate.

Cyber Essentials Plus

Cyber Essentials Plus is the highest level of certification offered under this scheme. It requires a hands-on technical verification to carry out vulnerability tests to ensure your organisation is protected from basic hacking and phishing attacks.

No Problem IT can achieve this for you using our onsite and remote auditing service. This means that your business can maintain continuity – regardless of whether you are all based in one office.

Getting Cyber Essentials certified protects you against 99% of threats and demonstrates your security credentials to regulators and prospects.

Cyber Essentials - Why get it?

According to the latest findings, four in ten businesses (39%) report having cyber security breaches or attacks in the last 12 months.

However, most common cyber-attacks are looking for targets which do not have the Cyber Essentials technical controls in place.

A Cyber Essentials accreditation will

- ✓ Protect you against 99% of threats by exercising a best-practices model.
- ✓ Demonstrate your security credentials and reassure customers that you are staying secure and protected.
- ✓ Attract new business including the Government contracts that require Cyber Essentials certification.
- ✓ Enhances GDPR compliance as your business is liable for any cyber breaches, Cyber Essentials improves the security of your client data.
- ✓ This scheme is simple and cost-effective.

The Process - 5 key controls

The Cyber Essentials scheme defines 5 key controls that will help protect your business and reduce risk. These form the main parts of the investigation:

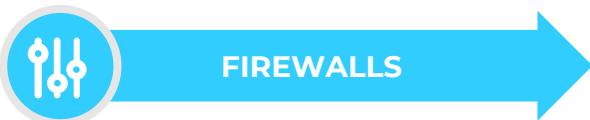

MALWARE PROTECTION

Ensuring anti-virus and anti-malware software is UpToDate and solutions are specifically tailored to meet your needs.

PATCH MANAGEMENT

Removing software vulnerabilities with automatic updates and removing unlicensed or unsupported software's.

FIREWALLS

Firewalls and gateways to block unwanted traffic

ACCESS CONTROL

Protecting user accounts and restricting access as needed.

SECURE CONFIGURATION

Monitoring and removing of old accounts and software's, reviewing strength of passwords.

The Process – How we work

No Problem IT is a Managed IT Support Provider, we are certified in Cyber Essentials and Cyber Essentials Plus licensing.

The basic Cyber Essentials certification is a self-certification and as such, we will manage it for you and ensure that you are compliant in all areas before submitting it and obtaining your certificate.

1

We run the Cyber Essentials certification as a prerequisite and ensure that your business is compliant in all areas.

2

We submit this to the external auditors who provide us with a checklist prior to the actual audit of any areas of concern which we then resolve.

The remote audit is then carried out, any issues are dealt with and resubmitted for audit.

4

Application is approved and certification issued.

Our Remote Audits

We run these audits by installing an agent on each machine which monitors the live security health of each device, and reports the malware and antivirus state as well as the version and security vulnerability of every piece of software on the machine.

“ I have used NPIT to look after all the IT for me and my businesses for years, and I have always been impressed with their responsiveness, performance and knowledge. They recently implemented our cybersecurity compliance policy which went without a hitch. All in all, Simon and his team have been brilliant - they do what needs to be done!”

Professor Sir Christopher Evans, OBE, Excalibur Healthcare Services

Cyber Essentials & GDPR

Getting GDPR ready has a reputation for being complex, costly and time-consuming.

This does not have to be the case! At NPIT we can help you develop a lasting data-protection strategy in a relatively short amount of time by utilising the IASME Governance framework to reduce your risk by over 80% and ensure you have processes in place for safely securing data and preventing breaches.

We achieve this by:

- ✓ Checking and resolving any security risks live, in real-time
- ✓ Data privacy risk assessment
- ✓ Digital risk assessment
- ✓ Developing smart GDPR compliant policies for distribution and guidance throughout your organisation

Cyber Essentials Certification

No Problem IT are trained and licensed to deliver Cyber Essentials and Cyber Essentials Plus certificates.

No Problem IT will guide you through the process to ensure you are fully prepared.
